

LOOKING FOR SOME IDEAS

on how you can work with SparkPost?

HERE ARE A FEW TO GET YOU STARTED:

- 1 Sign-up Form Use Case**

When a new user creates an account, developers can trigger welcome emails and contact information verification emails via SparkPost.
- 2 Password Recovery Use Case**

Developers can use SparkPost APIs to send password recovery emails to unique users.
- 3 Notification and Reminders Use Case**

Developers can use SparkPost to send out real-time, personalized notifications and reminders to users based on their preferences (e.g., price alerts, upgrade notifications and task reminders).
- 4 Product Purchase Receipts Use Case**

Using SparkPost, developers can trigger automatic purchase receipts on in-app purchases.
- 5 Email Delivery Reporting Dashboards Use Case**

With real-time analytics and reporting via SparkPost APIs, developers can create dashboards to monitor email deliveries, opens and bounces to better monitor their email sends.
